Powerful collaboration CAD editing and viewing software for sharing and modifying your 3D models with CAD and CAM projects. Autodesk Fusion 360 2603.0 is a trial product development app and 3D editor developed by Autodesk for Windows, it's powerful, advanced and reliable. The download has been tested by an editor here on a PC and a list of features has been compiled; see below. We've also created some screenshots of Autodesk Fusion 360 to illustrate the user interface and show the overall usage and features of this product development program. Create, modify and share 3D creative works with Autodesk Fusion 360 is a 3D computer-aided design (CAD), computer-aided manufacturing (CAM), and computer-aided engineering (CAE) software developed by Autodesk. It's a cloud-based platform that enables users to design, analyze, and fabricate products in a single workflow. Fusion 360 is used in a variety of industries, including automotive, aerospace, consumer goods, and construction. It offers a range of features and tools for 3D modeling, simulation, collaboration, and machining, among others. Some of its key capabilities include 3D modeling, 2D drawing, assembly design, plastic injection molding, sheet metal design, and simulation. The app supports more than 100 file formats including DWG, SLDPRPT, IPT, IAM, CATPART, IGES, STEP, STL, making it easy to share designs with your team, clients, partners, and friends. Features of Autodesk Fusion 360 Automation: Customizable Design Generators. CAD Design: 3D modeling, sketching and sculpting. CAD Interoperability: Import and export data between CAD tools. CAM: Toolpaths for CNC milling, 5-axis machining and 3D printing. Cloud Connectivity: Access data from anywhere. Collaboration: Cloud-based sharing and co-creation. Design Exploration: Parametric, direct and mesh modeling. Document Management: Securely store, access and share data. Documentation: Manufacturing drawings and other technical documentation. File format support: Upload and view more than 100 data formats including SLDPRPT, SAT, IGES, STEP, STL, OBJ, DWG, F3D, SMT and DFX. Manufacturing: Generative design, adaptive components and additive manufacturing. Rendering: Photorealistic images and animations. Robotics: Design, program and simulate robotic systems. Scripting: Create custom tools and commands. Simulation: Stress and motion analysis. Compatibility and License This download is licensed as shareware for the Windows operating system from 3D design and can be used as a free trial until the trial period ends (after an unspecified number of days). The Autodesk Fusion 360 2603.0.86 demo is available to all software users as a free download with potential restrictions and is not necessarily the full version of this software. What version of Windows can Autodesk Fusion 360 run on? Autodesk Fusion 360 can be used on a computer running Windows 11 or Windows 10. Previous versions of the OS shouldn't be a problem with Windows 8 and Windows 7 having been tested. It's only available as a 64-bit download. Filed under: Autodesk Fusion 360 Download Product Development Software Autodesk offers a 100% free Fusion 360 license to Students and Hobbyists. Students should use the Education license. Hobbyists, on the other hand, should be using the Personal Use license. Be sure to read the license qualifications outlined below to ensure that you qualify for a free Personal Use license. You can also learn more about the other 3 license types Fusion 360 offers. Learn how to sign up for the Free Fusion 360 for Personal Use license with this step-by-step video tutorial. Individuals with non-commercial personal design projects, individuals doing home-based non-commercial manufacturing and fabrication. Using for personal projects outside of their primary employment. Engaged in Hobby Businesses making less than \$1,000 a year. Learning for personal use, outside of a company environment or commercial training. Creating YouTube videos, blogs or other web-based content. The free Personal Use license will give you access to Fusion 360. However, it is important to note that there are a handful of features that are ONLY available with the commercial license. You can learn more about the features per license type, including what's not included in this free Personal Use license. The only way to sign up for the Fusion 360 for Personal Use License is to use the official Autodesk website. They have created a page specifically for the Personal Use license. Sign up for the Personal Use license here: The first step to getting Fusion 360 for free personal use (Hobbyists, retired Engineers, Tinkerer, etc) is to go to the official Autodesk page. Select the orange "Get Started Now" button. Select the orange "Sign In" button. This button is at the bottom of the page so you can simply scroll down if the previous button doesn't take you here. If you already have an Autodesk account from another product then you can sign in with the same account. If you don't have an Autodesk Account, select the "Create Account" link. Fill out the standard account details. You will then need to select the checkbox to agree to the Autodesk Terms of Use and Privacy Statement. Once everything is filled out, select the blue "Create Account" button. Congrats! Your account is now created. Autodesk is going to ask you if you would like to receive marketing and promotional emails. Select the checkbox if you would like emails, otherwise, make sure it is not selected. Then, click the blue "Done" button. You will then automatically be redirected back to the Personal Use page. You'll need to click the "Get Started" link. Note: If you were already using the Startup (former Hobbyists) license, then the link will automatically assign your account to the new Personal Use subscription. The download of Fusion 360 should automatically start. If you already have Fusion 360 installed then you can cancel/delete the download - there is no need to reinstall it (unless you want to double-check that you have the latest version)! Note: There may be up to a 30-minute delay before the new subscription is visible in your existing installation. I would recommend waiting for the 30 minutes before attempting to sign in. In the meantime, you can start to binge my popular course, "Learn Fusion 360 in 30 Days for Complete Beginners!" At some point, you may need to check your version number or license type. Select "About Fusion 360" from your computer's menu (while Fusion 360 is open). A dialog will open up in front of Fusion 360. You will then see the version number, your active license type, and when the license expires. The Personal Use license will last in 1-year increments. You will be able to renew the free license at the end of each year, so long as you still meet the qualifications. By the end of this short walkthrough, you'll have Fusion 360 up and running with the free Personal Use license. First off, be sure to read the license qualifications that I've outlined on my webpage, where you're watching this video. The most important qualification to note is that the Personal Use license only allows you to make up to \$1,000 a year annually via the hobby or business that you're using Fusion 360 for. If you are making more than that, with your use of Fusion 360, then you'll need to upgrade to a commercial use license. After confirming that you do qualify, the first step will be to go to the Official Autodesk page for Fusion 360 for Personal Use, which I've linked to on this page. Upon arriving at the page, you'll need to select the orange "Get Started Now" button. The button will link you to the bottom of the page, where you're then prompted to sign in with your Autodesk account. If you already have an Autodesk account from another Autodesk product, then you can go ahead and use that to sign in. Otherwise, after clicking the orange "Sign In" button, you'll need to create a new Autodesk account. I'll select the "Create Account" link. The account creation is pretty standard. Simply fill out your name, email, confirm your email, and then type out a password. You'll also need to select the checkbox to agree to the Autodesk Terms of Use and their Privacy Statement. Finally, once you have all of your information filled out, simply click that blue "Create Account" button. After creating your account, you'll be given the option to opt-in or out of marketing and other Autodesk emails. Then, you'll want to click the blue "Done" button. You'll then be redirected back to the Personal Use home page. From here, you'll see that it may take up to 30 minutes for your new account to work. I would recommend that you take a 30-minute break before trying to login. In the meantime, if you haven't already downloaded Fusion 360, then you can get that downloaded and installed. If you scroll up a little bit, you'll see either the Get Started text or the Download Fusion 360 link. After selecting the link, the website will automatically detect which operating system you're using, and it will then start the download of the respective copy. At this point, you'll need to follow the standard process for installing a new application on your operating system. This will vary a little depending on whether you're on a Mac or Windows computer. Once Fusion 360 is successfully installed you can go ahead and open it up. You'll then be prompted to sign in with your Autodesk username or email along with your account password. However, remember that you do need to wait at least 30 minutes from your account creation. After signing in, you're all set and ready to start learning and designing in Fusion 360. To double-check your license type you can find the "About Autodesk Fusion 360" option from the application's menu. The dialog will then state the version of Fusion 360 that you have installed, the active license type you have, and the date your license type expires. With the current Personal Use license, your license will expire in 1 year. But don't worry, at the end of the year, you'll then be able to renew your free license for one more year. You can then continue to renew your license every year unless the license qualifications change or you no longer qualify.
